color names

Just like Hex color codes, HTML color names can be used with inline HTML styles or in a separate CSS stylesheet.

HTML

```
<!-- In your HTML document -->
<body>
  <h1
style="color:IndianRed">Indian Red
Title Text</h1>
  <p style="color:SlateGray">Slate
gray paragraph text</p>
</body>
```

CSS

```
/* In your .css stylesheet */
h1 { color: IndianRed; }
p { color: SlateGray; }
```

That's all there is too it! If you want to learn more about using HTML color names and codes in your website, check out our other [tutorials](#) for some additional enlightenment.
